

# Abigail Endris

Rowlett, TX | endrisabigail@gmail.com | <https://github.com/endrisabigail>

## PROFESSIONAL PROFILE

---

Aspiring Full-Stack Developer and Technical Lead with a foundation in Software Engineering and a background in high-stakes management and financial services. Proven track record of architecting full-stack applications, implementing CI/CD pipelines, and leading cross-functional teams. Expert in technical troubleshooting and process optimization with a focus on scalable, user-centric design.

## TECHNICAL SKILLS

---

- **Languages:** Javascript, Java, Python, C++, C#, HTML5, CSS3 (Grid/Flexbox)
- **Frameworks & Libraries:** React, Node.js, Express, Unity, Three.js
- **Databases & Tools:** MongoDB (MERN), Firebase, REST APIs, Git/GitHub, Linux, Blender
- **Methodologies:** Agile/Scrum, SDLC, Waterfall, CI/CD Pipelines, Data Structures & Algorithms (DSA)

## EDUCATION (active)

---

University of North Texas | Denton, TX | **Expected Dec 2026**

Bachelors of Science in Computer Science

- **Relevant Coursework:** Data Structures, Software Engineering, System Programming

## TECHNICAL PROJECTS

---

**Hearth - Gamified Project Management Software** | *Full Stack Developer* | **MongoDB, Express.js, React, Node.js (MERN), REST API, Blender**

- Built a full-stack gamified productivity app where users manage tasks through a fully custom isometric "cozy-game" interface, with all 3D assets and environments designed and rendered in Blender.
- Designed and implemented a RESTful API handling complex CRUD operations with persistent data synchronization across a MongoDB database.
- Created an immersive isometric world using Blender for all asset creation, scene composition, and rendering — including multiple selectable characters, integrated seamlessly into a modular React frontend for a cohesive cozy-game experience.
- Engineered server-side logic for dynamic XP scaling, streak validation, and user progression, secured through JWT-based authentication with user data persisted in MongoDB.

**JojoPet - Chrome Productivity Pet** | *Full Stack Developer* | **React, JavaScript, CSS, Chrome Extension API**

- Developed an interactive productivity tool featuring an animated pet with state-managed "XP" and "happiness" metrics triggered by user task completion.
- Integrated Chrome Storage API for seamless data persistence and global state management across multiple browser sessions.

**Koda (Capstone UNT Sponsored Project) - A Baby Tracker App** | *Full Stack Developer & UI/UX Lead* | **React, Node.js, Figma, Three.js, Blender, System Modeling (DFD, ERD, Class Diagrams)**

- Contributed across the full stack, engineering Login and Registration flows with JWT-based authentication, form validation, and secure session logic, as well as building and refining multiple additional pages and features throughout the app.
- Designed and developed the complete frontend UI/UX from Figma wireframes through implementation, creating high-fidelity, responsive layouts optimized for mobile and high-frequency data entry.
- Modeled original 3D characters in Blender and integrated them into the app using Three.js, with state-driven animations that respond to logged baby activities (for example, triggering a feeding animation when a feed event is recorded).
- Led wireframe sessions and participated in project documentations that defined data interactions across a complex multi-user environment.
- Collaborated on backend API development and data modeling to support real-time synchronization of baby tracking events across multiple caregiver accounts.
- Collaborated on comprehensive project documentation within an Agile SDLC

**Questify (Team Semester Project)** | *Frontend Lead & Quality Assurance* | **React, CSS, Firebase Authentication, Crow**

- Solely engineered the frontend architecture, transforming static map designs and visual assets into a functional, interactive MVP.

- Developed client-side progression systems for XP and level tracking using React state management.
- Implemented secure user authentication via Firebase, managing login/logout workflows and session persistence.
- Independently conceptualized and executed high-fidelity wireframes, optimizing the mobile interface for high-frequency logging, "night-mode" accessibility, and rapid data entry.

## INTERNSHIP EXPERIENCE

---

**Systems Engineer Intern** | Palo Alto Networks | Plano, TX    June 2026 – August 2026 (Incoming)

- Incoming summer 2026 internship focused on pre-sales engineering, customer engagements, and cybersecurity solution architecture across technologies including SASE and XDR.

## ACADEMIC EXPERIENCE

---

**CAAM-ITEAM Summer Outreach Program**

Center for Agile and Adaptive Additive Manufacturing | University of North Texas | *Certificate of Completion - June 6, 2025*

- Completed an intensive week-long program on additive manufacturing and its applications in engineering.
- Attended modules on data science, cybersecurity, materials science, supply chain logistics, and diagnostics.
- Participated in hands-on lab sessions with advanced equipment to apply classroom principles to real-world manufacturing problems.
- Gained exposure to interdisciplinary collaboration and research environments within the UNT College of Engineering.

## CERTIFICATIONS

---

**Programming with everyone (Getting Started with Python)** | May 2025

**Introduction to Cloud Computing** | August 2025

**Continuous Integration and Continuous Delivery** | August 2025

## EMPLOYMENT HISTORY

---

**Bank Teller** | Wells Fargo Bank, NA | Rockwall, TX    May 2024 – March 2025

- Resolved complex technical and account-related issues under pressure, maintaining high accuracy with sensitive financial data.

**Customer Service Representative** | Chewy, Inc | Richardson, TX    May 2022 – May 2024

- Provided technical troubleshooting for account and website functionality in a fast-paced environment.

**Associate Manager** | La Madeleine | Rowlett, TX    Jul 2020 – Jan 2022

- Led a team in ensuring operational efficiency; completed onboarding and conflict resolution for new staff.
